Education

2021 – 2025	**I am currently enrolled at the High Institute for Information Systems and Computer Science on 6th of October City, in the third year, specializing in Computer Science.**

Projects

Amazonclone ⧉
- It is a web application that mimics the interface and functionality of Amazon.
- The Fetch API is used to communicate with the site's API and retrieve the requested data. Fetch API helps in sending HTTP requests and receiving responses from the server.
- Redux Toolkit is used to manage application state and control data flow.
- React Router DOM to manage page navigation and create different routes in the application.
- Use Tailwind CSS to format and design the user interface

E-commerce ⧉
- In this project, multiple technologies were used including ReactJS, HTML, TailwindCSS, react-router-dom, fetch API, react-typed, and Redux Toolkit.

Room-booking ⧉
- This project is a web application that uses HTML, CSS, React JS, React Bootstrap and React Hooks. The app allows users to book rooms and manage their reservations.
- React Router DOM to manage page navigation and create different routes in the application.
- REST APIs (GET, POST, PUT, DELETE) are implemented by Axios .
- AUTHORIZATION store Token In Cookies
- Protected Routes permissions:Admin and user.

Restaurants ⧉
- react.js and tailwindCSS

CRUDS ⧉
- HTML,CSS,Javascript .Full product management system
- Storing data in LocalStorage
